

InsightForge Analytics

Job Description | Data Analyst

PlacementHub 2027 Campus Recruitment - Demo Document

Role Snapshot

Role	Data Analyst
Employment type	Full-time
Domain	Analytics
Work mode	Hybrid
Work location	Gurugram
Expected hires	5
CTC	INR 8.5 LPA
Application deadline	8 February 2027
Joining	August 2027
Service bond	No service bond

Role Purpose

Translate operational questions into reliable SQL analysis, concise dashboards, and clear recommendations for consulting project teams. Analysts are expected to combine technical accuracy with business-context communication rather than producing charts without interpretation.

Key Responsibilities

- Understand a business or operational question and convert it into measurable analysis steps.
- Query, clean, reconcile, and validate structured data using SQL and spreadsheet-based checks.
- Build concise analytical summaries and dashboards that distinguish facts, assumptions, and recommendations.
- Use Excel for structured analysis and Power BI or equivalent BI tools for visual reporting.
- Apply basic statistical reasoning to compare trends, variation, and data-quality issues.
- Document analysis logic so another analyst can reproduce the result.
- Communicate findings to consulting/project teams using clear language and appropriate visuals.

Skills

Required	SQL; Excel; Data Analysis; Communication
Preferred	Python; Power BI; Statistics; Pandas

Eligibility

Minimum CGPA	7.3 / 10
Eligible branches	All configured 2027 engineering branches
Active backlogs	Maximum 0
Graduation year	2027
Additional requirement	Be prepared to discuss a data, analysis, or research project

Selection Process

Round	Stage	Format	What is assessed
1	Aptitude & Case Exercise	Assessment	Numerical reasoning, spreadsheet interpretation, and a short business case.
2	Analytics Interview	Technical interview	SQL approach, analysis framing, validation logic, and dashboard reasoning.
3	HR Discussion	HR discussion	Consulting communication, work-location readiness, and joining expectations.

What a Strong Application Looks Like

- Resume shows at least one project where data was inspected, validated, analysed, or used to support a decision.
- Candidate can explain SQL/Excel reasoning instead of only naming tools.
- Charts or dashboards are supported by a clear question and conclusion.
- Candidate distinguishes correlation, assumption, and evidence when discussing results.
