Job Description | Backend Engineer

PlacementHub 2027 Campus Recruitment - Demo Document

## Role Snapshot

|                      |                     |
|----------------------|---------------------|
| Role                 | Backend Engineer    |
| Employment type      | Full-time           |
| Domain               | Backend Engineering |
| Work mode            | Hybrid              |
| Work location        | Bengaluru           |
| Expected hires       | 4                   |
| CTC                  | INR 10.5 LPA        |
| Application deadline | 25 January 2027     |
| Joining              | July 2027           |
| Service bond         | No service bond     |

## Role Purpose

Build and maintain Java-based services, API contracts, data integrations, and observable production workflows under senior-engineer guidance. The role is designed for graduates who enjoy backend fundamentals and can turn requirements into dependable, testable services.

## Key Responsibilities

- Implement and maintain backend service features with clear API contracts and validation.
- Write readable Java code and contribute to modular service design under code review.
- Work with relational data, SQL queries, and data-integration workflows.
- Investigate defects using logs, traces, test cases, and reproducible debugging steps.
- Participate in pull-request reviews, technical documentation, and release-readiness checks.
- Collaborate with frontend, platform, and QA peers to resolve interface and integration issues.
- Document assumptions, edge cases, and operational considerations for future handover.

## Skills

|           |                                 |
|-----------|---------------------------------|
| Required  | Java; Data Structures; SQL; Git |
| Preferred | Spring Boot; REST APIs; AWS     |

## Eligibility

|                        |                                                                                                     |
|------------------------|-----------------------------------------------------------------------------------------------------|
| Minimum CGPA           | 7.5 / 10                                                                                            |
| Eligible branches      | Computer Science and Engineering; Information Technology; Electronics and Communication Engineering |
| Active backlogs        | Maximum 0                                                                                           |
| Graduation year        | 2027                                                                                                |
| Additional requirement | Comfort explaining one backend or systems project                                                   |

## Selection Process

| Round | Stage                  | Format                 | What is assessed                             |
|-------|------------------------|------------------------|----------------------------------------------|
| 1     | Online Assessment      | Online assessment      | Programming, SQL, and debugging assessment.  |
| 2     | Technical Interview I  | Technical interview    | Fundamentals, project depth, and API design. |
| 3     | Technical Interview II | Technical interview    | Problem solving and production judgement.    |
| 4     | People Conversation    | HR / people discussion | Role expectations and communication.         |

## What a Strong Application Looks Like

- Resume shows specific project ownership rather than only listing technologies.
- Candidate can explain data structures, SQL reasoning, API behavior, and debugging choices.
- GitHub or project evidence is organized enough for an interviewer to understand the work.
- Answers distinguish personal contribution from team contribution.
