

VoltEdge Power Systems

Recruitment Process & Candidate Instructions | Graduate Electrical Engineer

PlacementHub 2027 Campus Recruitment - Demo Document

Drive Summary

Company	VoltEdge Power Systems
Role	Graduate Electrical Engineer
Application deadline	14 February 2027
Expected hires	4
Process mode	Offline
Work location	Vadodara
CTC	INR 7.2 LPA
Joining	July 2027

Recruitment Stages

Round	Stage	Format	What is assessed
1	Core Technical Test	Offline	Electrical fundamentals, machines, circuits, basic controls, and engineering aptitude.
2	Technical Interview	In-person interview	Core concepts, lab/project depth, troubleshooting, drawings, and safety judgement.
3	HR Interview	In-person discussion	Site readiness, communication, location flexibility, service commitment, and joining plans.

Technical Test Syllabus & Preparation

- Review circuit fundamentals, three-phase systems, electrical machines, transformers, protection basics, power-factor concepts, and introductory control concepts.
- Be comfortable interpreting simple single-line diagrams, electrical measurements, and common laboratory observations.
- Review safety fundamentals relevant to electrical work and field environments.
- A basic non-programmable scientific calculator may be carried, subject to the final campus/test instructions.
- Do not bring unauthorized notes, programmable devices, or share assessment content with other candidates.

Offline Reporting & Document Checklist

- Report at the time/location communicated through PlacementHub and campus placement coordination.
- Carry college ID and one valid government-issued photo ID.
- Carry a current printed resume and any academic documents specifically requested by the placement team.
- Wear formal or neat professional attire suitable for an engineering campus interview.
- Keep phone available for coordination, but follow instructions about device use inside test/interview rooms.

Technical Interview Preparation

- Prepare one electrical/electronics project or laboratory experience in depth: objective, circuit/system, measurements, problems faced, and what you personally did.
- Expect conceptual follow-ups that test why a system behaves a certain way, not only formula recall.
- Be ready to discuss safety decisions and what you would verify before energizing or troubleshooting equipment.
- Preferred exposure to PLC, SCADA, MATLAB, or AutoCAD Electrical should be explained honestly at the level actually used.

Service Commitment & Site Readiness

The role carries an 18-month service commitment with proportional training-cost recovery. Candidates should review the formal terms before accepting an offer. Site travel after training is part of the role expectation and may involve industrial customer locations.

Result Communication

Round outcomes and final selection status will be published through the official PlacementHub/company workflow. Interview feedback or informal verbal comments should not be treated as a final offer.
